# Interactive Password Complexity Dialog

## TLDR

Previously, an administrator did not know the password complexity requirements when setting up a password for a user. Now, the password complexity requirements are clearly shown and as-you-type feedback is provided as they are being met.
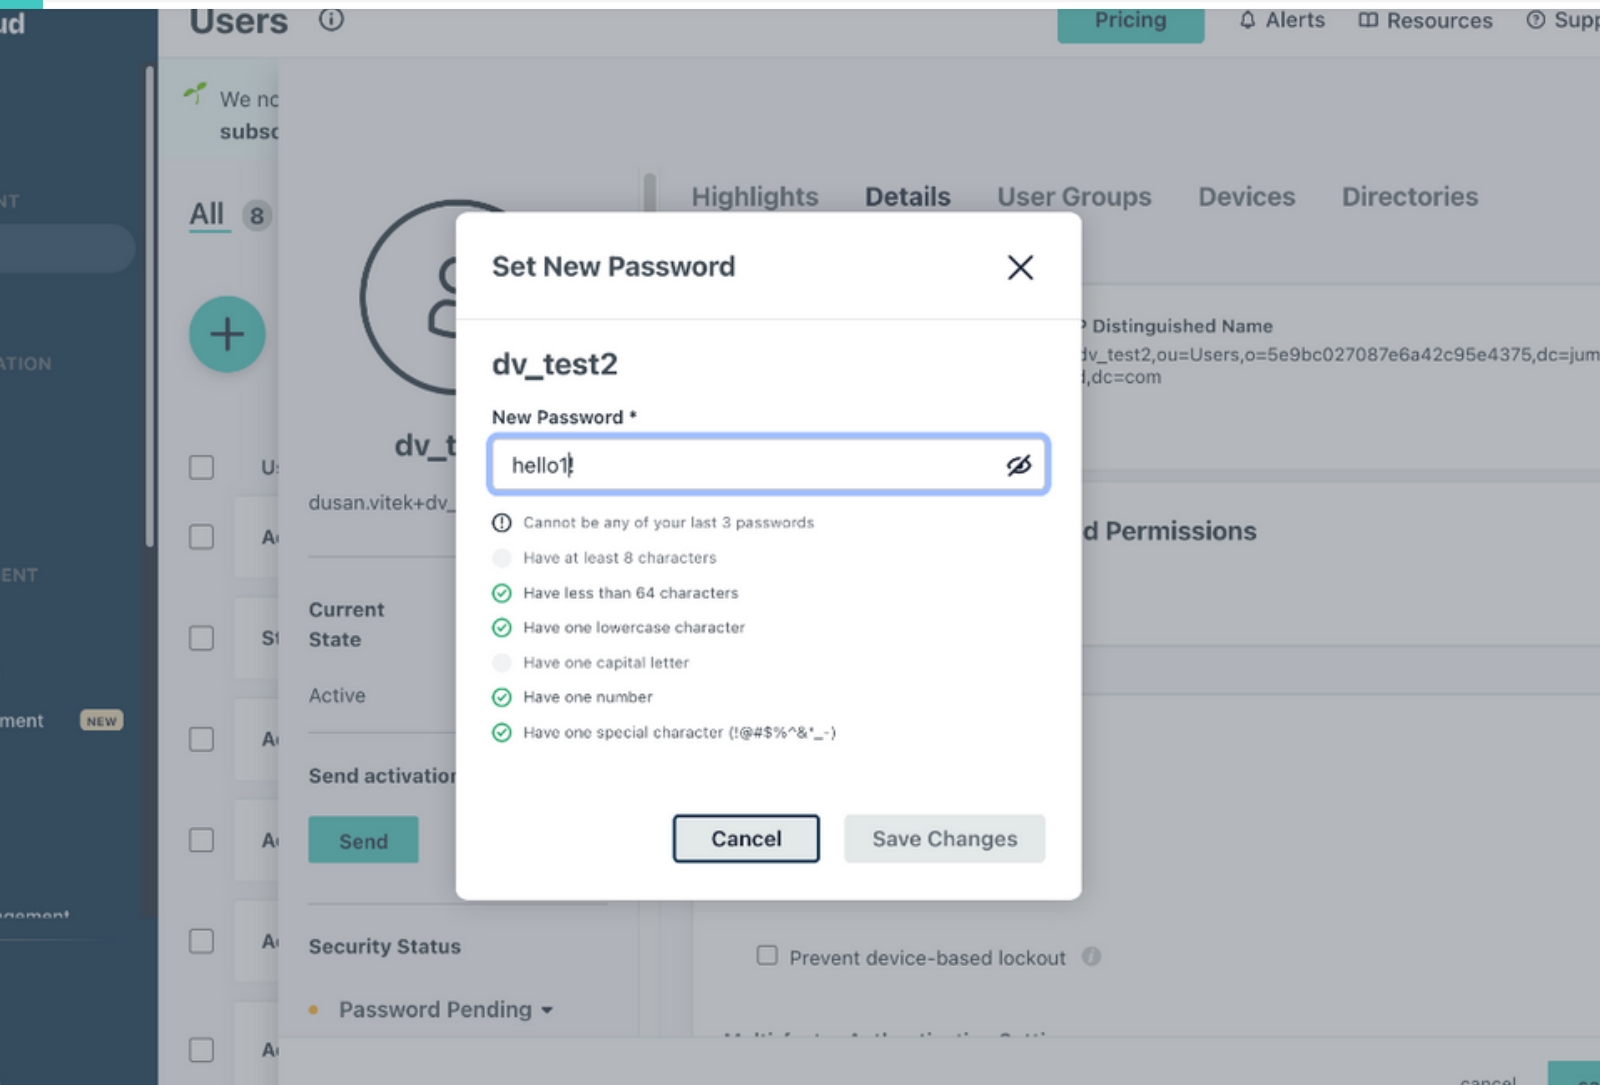

## What Will I Experience Now?

- The new **Users> Details>Set New Password** Screen dialog box shows and validates all password complexity requirements, not just some of them.
- Validation is performed both by the front-end component and the API endpoint.
- The dialog is designed to be mobile responsive.
- The dialog is WCAG-compliant.
## What Will This Look Like?

## Key Benefits

- A much cleaner user experience: Clear explanation of all password complexity requirements and as-you-type visual feedback.
- Security and compliance: The new API endpoint checks all requirements, not just a select few.
- More elegant console UI: The Admin Portal no longer shows permanently empty in-page password input fields in the User Details page.

## WHEN IS IT COMING?

A gradual rollout started August 23rd.
By September 2, 2022 all Admins will have this feature!
